

Edgelit Menuboard

The 40mm tablet style menu board profile (based on a Strada HV lightbox) adds style and functional simplicity to your illuminated menu boards. Hinged covers simplify menu changing, and multiple covers in a single light box frame enables economic construction of large menu board systems.

Designed for internal application, the Menuboard can be installed on an angled sub-frame, or simply surface mounted to a wall. The slim profile saves space and installation cost as the menu board doesn't need to be recessed.

Superior panel brightness is achieved through Interium's edge-lighting panel technology. The high brightness and even illumination supports a true representation of your graphic display. This is particularly important when displaying food and beverage products.

T5 lamp technology means longer operating life, higher light output for power consumed and excellent colour rendering for your images. Average effective lamp life is 16000 hrs.

Simple image changing is achieved by opening the hinged acrylic covers and clamping the image in the retaining magnets.

Your choice of frame colour can be achieved with powder-coated or spray painted finishes.

Electrical certification ensures all Interium products meet safety standards.

Quality manufacturing means the Interium Menu Board display will continue to perform for many years to come. The product is supported by a 12 months warranty on general construction and OEM warranties supporting tubes and electronic ballasts.
