

Strada Edgelit Display

The 40mm deep Strada 'tablet' profile is recommended as a general purpose illuminated display. Simple and functional, the Strada elegantly frames and illuminates your product or service promotion.

Designed for internal and protected external applications, the Strada can be wall mounted, recessed, hinged as a door, suspended on cables or rods, or fixed as a freestanding display.

Superior panel brightness is achieved through Interium's edge-lighting panel technology. The high brightness and even illumination supports a true representation of your graphic display.

Your choice of frame colour can be achieved with anodised, powder coated or spray painted finishes.

T5 lamp technology means longer operating life, higher light output for power consumed and excellent colour rendering for your images. Average effective lamp life is 16,000 hrs.

Simple image changing is achieved by removing the magnetically attached cover. Large Strada signs include 3M Dual Lock™ to provide additional mechanical support for the cover, and more control during its removal. (Profile depth 43mm.)

Electrical certification ensures all Interium products meet safety standards.

Quality manufacturing means the Strada display will continue to perform for many years to come. The product is supported by a 12 months warranty on general construction and OEM warranties supporting tubes and electronic ballasts.
