

Maxii Edgelit Display

The 28mm deep Maxii "tablet" profile is the ideal lightbox for A4, A3 and A2 images. Powered by mains or low voltage, the Maxii is an excellent "Point Of Purchase" display.

Designed for internal application, the Maxii can be surface mounted, recessed into walls, suspended in window mullions or mounted as a freestanding display.

Superior panel brightness is achieved through Interium's edge-lighting panel technology. The high brightness and even illumination supports a true representation of your graphic display.

Your choice of frame colour can be achieved with anodised, spray painted or powder coated finishes.

T2 lamp technology is a 7mm mini fluorescent tube delivering high light output and superior colour rendering for your image. Average lamp life is 8,000hrs.

Simple image changing is achieved by removing the magnetically attached cover.

Electrical certification ensures all Interium products meet safety standards.

Quality manufacturing means the Maxii will continue to perform for many years to come. The product is supported by a 12 months warranty on general construction and OEM warranties supporting tubes and electronic ballasts.
